Returns Park base case

Returns Park | 60-month committed term from 1 Dec 2026 | 15.00% required return

DRAFT - NOT APPROVED. Figures may change before the model is approved.

Model	Returns Park base case (version 1)
Facility	Returns Park
Status	Draft - not approved
Committed term	1 Dec 2026 - 30 Nov 2031 (60 months)
Discount rate	15.00% a year (Manual rate), 1.171% a month
Last updated	10 Nov 2026 by e2e+d4ac5550-36db-42b5-bca9-62dbaa4321fb@test.local

Projection only. Every figure is calculated from the saved model assumptions and the committed lease - it is not a record of actual results, not an audited statement and not guaranteed profit.

Committed project valuation

The full 60-month committed lease term at the stored 15.00% annual rate. Project NPV, IRR, both paybacks, cumulative free cash flow and profitability index all read the same dated cash-flow series.

PROJECT NPV INTERPRETATION

Forecast value exceeds the required return

A positive NPV means the modelled project cash flows are worth S$85,323 more than the initial investment after discounting at 15.0%. It is not guaranteed profit.

S$85,323

Project NPV **S$85,323** Committed lease case	Annual discount rate **15.0%** Manual rate, 1.171% monthly	Project IRR **39.5%** Same project cash-flow series
Simple payback **Month 31 + 19 days** Undiscounted recovery	Discounted payback **Month 38** Time-value adjusted at 15.0%	Cumulative free cash flow **S$192,700** Undiscounted through month 60
Initial investment **S$108,000** S$108,000 CapEx + S$0 deposit	Profitability index **1.79x** Above required return	Renewal scenario NPV **Off** Excluded from committed case

Equity NPV is not calculated: the model has no financing drawdowns, interest, principal repayments or lender fees, so these are project (unlevered) cash flows.

NPV breakeven rate

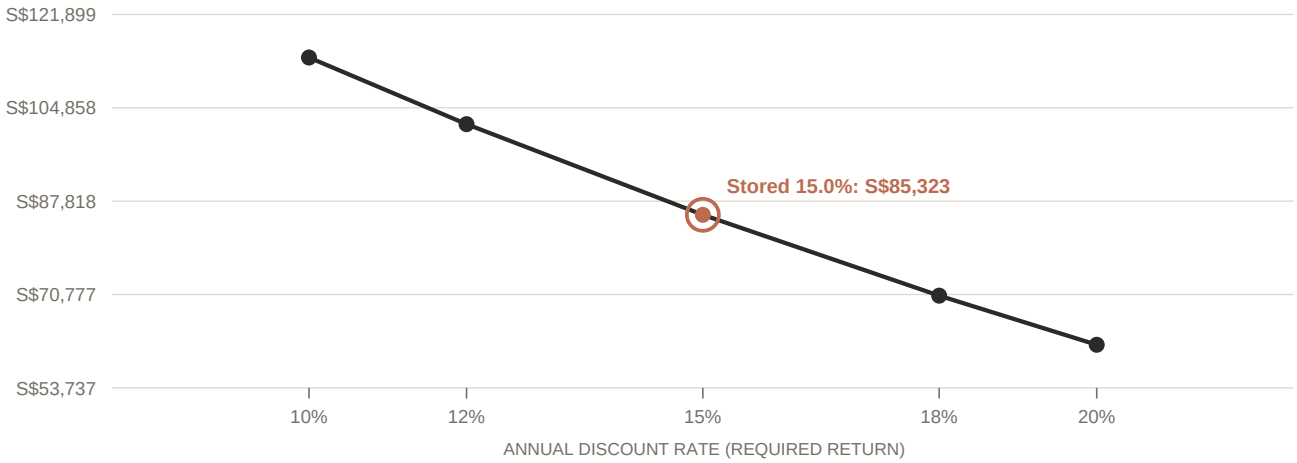
The theoretical required return at which Project NPV becomes S$0 - the same as Project IRR. It is not occupancy, rental yield, profit margin or guaranteed profit.

REQUIRED RETURN	PROJECT NPV
Below 39.5%	Positive
Above 39.5%	Negative

Current decision check: at the stored 15.0% required return, Project NPV is S$85,323 and is positive.

Discount-rate sensitivity

Project NPV recomputed from the same committed cash-flow series at each tested required return. The horizon, lease expense and cash flows do not change - only the rate.



TESTED ANNUAL RATE	PROJECT NPV	
10.00%	S$114,034	
12.00%	S$101,868	
15.00%	S$85,323	Stored rate
18.00%	S$70,566	
20.00%	S$61,602	

Scenario comparison

Occupancy-only comparison on the same committed lease, operating costs, capital, operational start and valuation rate. The Base column is the committed valuation above.

METRIC	DOWNSIDE	BASE (SAVED PLAN)	UPSIDE
Project NPV	S$35,862	S$85,323	S$115,799
Project IRR	24.7%	39.5%	50.0%
Simple payback	Month 39 + 18 days	Month 31 + 19 days	Month 27 + 14 days
Discounted payback	Month 49 + 11 days	Month 38	Month 32 + 10 days
Cumulative free cash flow	S$127,787	S$192,700	S$231,664
Initial investment	S$108,000	S$108,000	S$108,000
Annual discount rate	15.0%	15.0%	15.0%

Downside: Move-ins -20% - churn +25% - stabilisation -5%. Lease, OPEX, capital and horizon unchanged.
Upside: Move-ins +20% - churn -20% - stabilisation +3%. Lease, OPEX, capital and horizon unchanged.

Optional renewal

A separate comparison run - never included in, and never replacing, the committed case.

Optional renewal is off for this model. The committed case excludes any renewal.

Monthly discounted cash flow

The exact series behind Project NPV and IRR: 60 monthly rows plus the commencement outflow. Period = contractual months from commencement. Amounts in S$, rounded to whole dollars (the DCF CSV export carries cents); negative amounts are cash out.

How the returns are calculated

- One dated cash-flow series: t0 is the commencement outflow (capital investment plus any refundable deposit); each following row is that month's operating cash flow (revenue less lease and other operating costs). Opening and closing stub months are prorated to their exact dates.
- Each row is discounted at the stored 15.00% annual rate: discount factor = (1 + annual rate) ^ -(period / 12). Project NPV is the sum of discounted cash flows.
- Project IRR is the annual rate at which the same series has an NPV of zero. Simple payback is when cumulative undiscounted cash returns to zero; discounted payback uses the discounted cash flows.
- Profitability index = present value of future cash flows / initial investment.
- Scenarios change occupancy only (move-in pace, churn, stabilisation target); lease, operating costs, capital, operational start and rate are unchanged.
- R11: the live model has no tax, financing or working-capital timing, so monthly NOI is used as operating cash; opening working capital stays inside the initial investment and is not released at term end; no property or fit-out sale value is assumed.
