Projection only. Every figure in this report is calculated from the model assumptions listed below - it is not a record of actual results and is not an audited statement. If the assumptions change, the projection changes.

Headline projection

Base case from the saved model. Returns are measured over the first 2 model years from the opening date.

Capital investment **S$108,000**	Weighted start rent **S$5.64** per sq ft per month	Target occupancy **92.0%** 2,274 sq ft lettable
NOI positive **Month 8 (Jul 2027)**	Stabilised occupancy **Month 13 (Dec 2027)**	Payback **Not in horizon** Cumulative cash back to zero
IRR (2-year view, annualised) **-94.6%** Supplementary view, not the committed Projec...	NPV through Year 2 at 8% **-S$115,203** Supplementary (manual)	Cash after 2 years **-S$114,861** Cumulative, after capital

Committed project valuation

Full 12-month committed term (15 Dec 2026 to 14 Dec 2027) at the stored 15.00% annual rate (manual). R11: the live model has no tax, financing or working-capital timing, so monthly NOI is used as operating cash; opening working capital stays inside the initial investment and is not released at term end; no property or fit-out sale value is assumed.

Project NPV **-S$115,486** At 15.00% (manual)	Project IRR **-95.29%** Same cash-flow series as NPV	Simple payback **Beyond horizon** Undiscounted
Discounted payback **Beyond horizon** At 15.00%	Cumulative free cash flow **-S$114,861** Through committed end	Profitability index **-0.07** PV of future flows / investment

Projected results by year

Model years run 12 months from the opening date; each row shows the calendar months it covers. Other cost = operating costs other than the lease. NOI = revenue less lease and other cost. Occupancy is at year end. Cash is cumulative and starts at minus the capital investment.

YEAR	REVENUE	LEASE	OTHER COST	NOI	MARGIN	OCC. %	CASH
Year 1 Dec 26 - Dec 27	S$67,539	S$60,000	S$14,400	-S$6,861	-10.2%	70.4%	-S$114,861
Total 1 year	**S$67,539**	**S$60,000**	**S$14,400**	**-S$6,861**			

Monthly projection

The first 13 months from the opening date. Sq ft = occupied area and Occ. % = occupancy, both at month end; rent psf is the monthly rate per sq ft.

The opening month is prorated for a mid-month opening date.
The final month is a closing stub ending on the committed end date - revenue, costs and move-ins are scaled by its partial period.

Scenarios

Downside and upside change occupancy only (move-in pace, move-out rate and the stabilisation target). Rent, lease, operating costs and capital stay as in the saved plan.

How the projection is calculated

- Occupied area grows each month by the move-in pace, less move-outs (the move-out rate applied to occupied area), and is capped at the stabilisation target.
- Revenue = occupied area x rent per sq ft. Rent starts at the weighted rate of the unit mix and rises by the annual increase at each model-year anniversary.
- Operating costs = landlord lease (per the lease schedule, after any rent-free months) + other operating costs. NOI = revenue - operating

costs.
- Cash starts at minus the capital investment and adds each month's NOI. Payback is the first month cumulative cash reaches zero.
- IRR uses the capital investment and monthly NOI only (no sale or terminal value, financing, tax or depreciation). NPV through Year 2 discounts the same cash flows at 8% a year (manual). Operating cash-flow IRR, no sale value included.
- Lease renewal beyond the schedule is not secured; the last scheduled rent is carried forward.
- Committed project valuation: the full 12-month term at the stored 15.00% annual rate (manual). NPV, IRR, both paybacks, cumulative free cash flow and PI are read from that one series.
